Advanced time and attendance solutions

SonicEnterprise

- Data collection device integration

- PC timesheet entry

- Timesheet approval manager

- Employee alerts and messaging

- Internet timesheet access

- Mobile time entry

- Multi-site access and consolidation

- 3rd-party software integration

- Customization services available

SonicEnterprise is a modular solution designed to automate the exchange of information between your workforce and your business applications. Advanced management tools and integration capabilities reduce administrative costs and errors associated with manual data entry.

A centralized database provides access to employees regardless of whether they are on the shop floor or behind a desk.

Data collection: Our time clock module not only provides the traditional time clock functionality, but can also provide your employees with the ability to edit their time all -at-once using the SonicClock's built-in timesheet editor.

SonicWeb Clock: Office employees can use the Web-based clock application to quickly track and allocate their time to jobs, projects or manufacturing orders.

SonicWeb Timesheet: Provides the flexibility of entering and managing timesheets from anywhere using a web browser. Securely enter daily time entries and allocate them using a list of active project or cost center codes retrieved from the central database.

SonicWeb Approvals : Control costs and increase efficiency by keeping track of employee labor . Sonic Web Approval Manager supports multi-level management approvals to reduce the time spent reviewing employee time. Approval management can be configured with as many levels as required. Filters and advanced time editing features streamline the approval process and provide greater control at every level of management.

SonicEnterprise

SonicAlerts: Communicate more effectively with your employees by utilizing alerts. Alerts can be set to display messages by employee, project, task, date or time. Alerts can also be triggered by sign-in/out or when work begins/ends. Managers can quickly and easily send a one-time message to one or more employees or schedule global reminders.

SonicMobile: Easily track time on your hand-held mobile device in real-time. For mobile users with internet connectivity, time can be tracked online through the use of a mobile web browser.

Multi-site: The multi-site module allows you to install the SonicClock in multiple locations using a standard internet connection. Data is captured at each location and stored on a central server, providing management with accurate and real-time information throughout the entire enterprise.

Technical Specifications

Server Requirements
- Microsoft Windows® Server 2000 or greater
- Microsoft SQL Server 2005
- IIS 6.0 or greater with .NET Framework 2.0 (SonicWeb Option)

Minimum Workstation Requirements
- Pentium® III - 500MHz
- 256 MB RAM
- Windows® XP or greater
