

SonicClock

- Large 15 inch screen
- Bright TFT colour display
- Integrated touch screen
- Graphical user interface
- Ruggedized aluminum case
- Sealed enclosure
- Water and dust resistant
- Windows® XP
- No moving parts
- Wireless networking ready
- Low heat/power consumption
- Industrial-grade external connectors

The SonicClock by Manusonic offers a whole new level of functionality above and beyond traditional time clock devices. Providing more than simple time and data collection, Sonic Clock is an interactive point of communication with your entire workforce.

Time Collection: A large graphical interface allows quick and easy employee interaction while providing ample screen area for updating personal timesheets and accessing additional information.

Construction: Built to last, the SonicClock's aluminum enclosure prevents rust and corrosion. The sealed case along with IP-rated external connectors ensures the internal components stay dry and protected for long-life operation.

Management: Timesheet approval, administrative reports and user-management functions can be performed from any PC-based workstation or directly from the SonicClock.

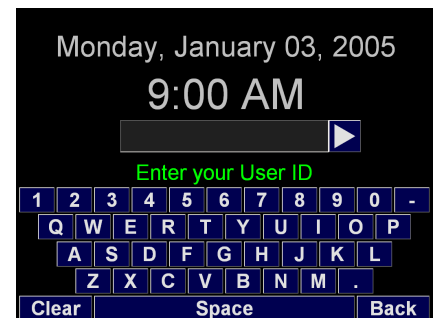

Technology: Utilizing the latest in computer technology, SonicClock provides your employees with access to information through existing applications, databases or web sites. Standard serial, parallel and USB ports provide connectivity options for additional hardware.

Display: The 15 inch colour LCD and industrial-grade touch screen offer easy viewing and error-free operation, even in harsh environments.

Integration: SonicClock's bidirectional integration provides your workforce with access to information such as job codes, equipment costs, inventory levels and technical specifications, while transferring data back to HR, Payroll, Job Cost or other systems.

Networkability: Installing SonicClock in your company is as easy as installing an additional desktop computer. A standard RJ45 Ethernet connection allows for a quick connection to your existing computer network. A wireless networking option is also available.

Security: The SonicClock can be configured for employee access by simple PIN entry. Larger companies can expedite the "Log in" process using the Proximity card reader option. Access to management features and custom links can be restricted by user ID.

SonicClock

SonicClock features & benefits:

- Centralized data collection and administration provides real-time information
- Multi-level job code look-up features for fast and accurate labour allocation
- Full timesheet edit capability eliminates time consuming paper-based tickets
- Large easy-to-use interface minimizes errors
- Document links provide employees with access to CAD drawings, technical specifications, safety documents and instructions.
- Run other Windows-compatible applications such as receiving, shipping control, inventory management and automation software.

Technical Specifications

Operating System

- Windows XP Embedded

Display

- Integrated flat panel LCD
- Standard resolution (15" Model): 1024 × 768

Touch Screen

- Durable Projective Capacitive technology
- Industrial-grade glass surface

Network

- 10/100 Base-T Compatible

Construction

- Water-tight aluminum enclosure
- IP65-rated external connectors
- Wear-resistant powder-coat finish (Black)
- Easy wall-mount installation

Dimensions

- Case size: 18" W x 15" H x 3.5" D
- Screen area: 12" W x 9" H
